Project Description

Exclusive is a party app designed to make the best night for all our users. At Exclusive, we have partnered with the best clubs all around the world. With location activation and a thoughtfully built survey system, we use your information to curate the best night of your life. We also have a history page where you can access your best nights and relive them again. Whichever kind of music you prefer and whether you're single or not we are here to help you. With a long list of users and AI power, we will give you a compatibility rating with the clubs in your area. Once you feel like this is where you want to spend the night, click pay and you are all set. Going by yourself or going as a group EXCLUSIVE is always here to make your night better!

Project Explanation

Incorporated into our project is the knowledge and the use of vue.js, json, database connections, and web based user interface. Without these tools, it would make it tedious to create such a webpage. To create the proper design for our project we first designed our user interface on FIGMA and created codes to make these designs work on vue.js. To make the signup and login pages function properly we used server.js to connect them whilst also using a verification system. Furthermore to connect the respective pages to their proper location, router is used. All in all these are the tools used in our project.

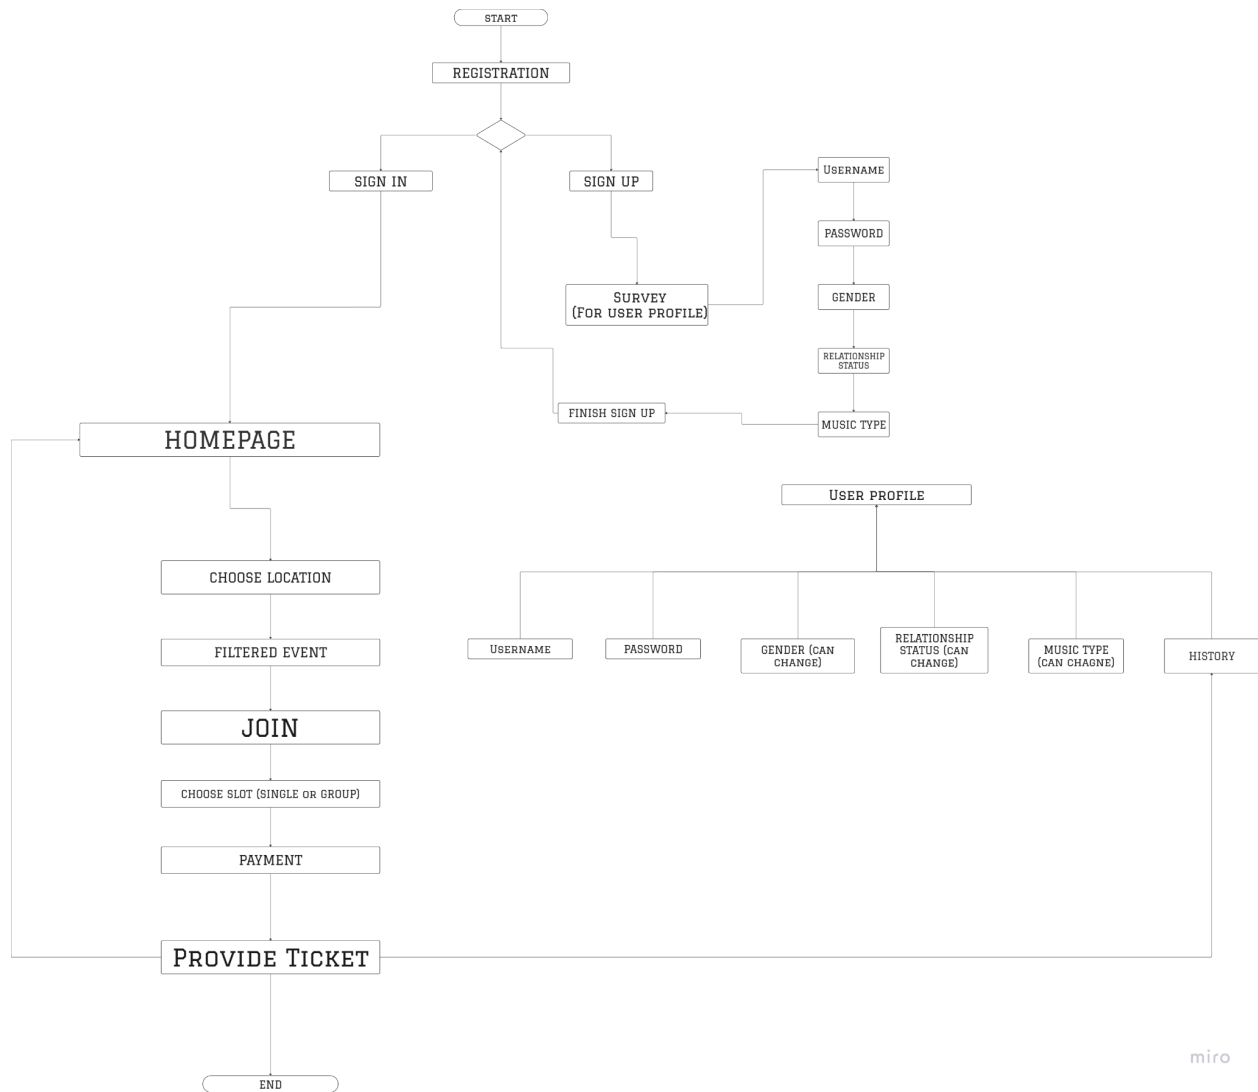

Features of the Webpage

- Authentication Requirement
- Compatibility capabilities for users
- Location handling
- Aesthetic and simple to use interface
- History access for users
- Communication with service providers
- Communication with other users

USER INTERFACE (FIGMA)
